## Winter garden – A holiday atmosphere within your own four walls

Do you make great demands of your living environment? If so, you will certainly not wish to compromise in your choice of a winter garden – and the right choice for you is s:stebler! With extraordinary attention to detail, variety of styles and our patented system of lamella glazing, we have a solution for just about every situation presented by architects and discerning home owners. With our solid base of experience, aesthetic approach and tireless search for perfection, we pursue the aim of introducing and preserving a relaxing holiday atmosphere in the winter garden of your choice.

S

#### **Pleasant room climate.**

Pleasant room climate. The individual glass panes can be conveniently adjusted at any angle up to an inclination of 75 degrees – by means of an electrical control. This can also be incorporated into the building automation system. Thanks to optimum ventilation a comfortable, individually controllable room climate is guaranteed. The s:stebler conservatory, in all its forms of construction, can be lived in all year round. In addition the s:stebler patent solutions permit maximum transparency.

**Absolutely watertight.** Our glazed constructions are absolutely watertight when correctly installed. Rubber seals are fitted both inside and outside on the slatted glazing elements. The overlapping glass surfaces and external rubber seals prevent all water penetration.

**Unrivalled longevity.** We use only high quality materials, like high-grade steel supports, non-rusting small and connecting parts and two-pane safety glass. These all guarantee long life and a glazed assembly of the highest standard.
