

Lamella glazing – a practical solution for almost any application

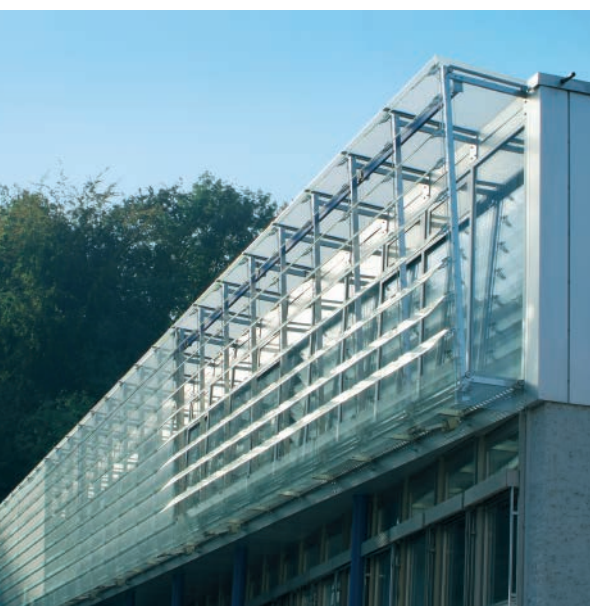

The proven s:stebler glass lamellas are put to practical use in very many areas of application. Whether as internal courtyard glazing, glass lamella roofing, glass pyramids, glass gable roofs or lighting strips: The glass lamella technology makes good sense almost anywhere. Thanks to s:stebler glass lamellas much expensive investment in ventilation systems has already been saved – above all in public areas. It is not just because of their attractive design, innovation and functionality that s:stebler products stand out from the competition for their attractive design, innovation and functionality – to say nothing of their unrivalled longevity!

Filigree and attractive. The special method of construction gives our glass lamella a pronounced filigree look. The entire high-grade steel frame construction is reduced to a minimum and harmonises with all building and furnishing styles. It is not without good reason that many designers and architects specify the s:stebler system.

Proven and patented. Let our many years of experience in metal construction reassure you – the s:stebler construction system and lamella glazing are patented and have been tried and tested in practical use many times over. Our many references and installations speak for themselves.
