Parallel action and top-hung open-out windows

s: 309

Ventilation with no fear of intruders?
Open windows even when a storm is brewing?
No problem with the new generation of windows from s: stebler! The parallel action and top-hung open-out windows can be extended or opened vertically by means of fittings installed in the rabbet and built-in electric motors. These windows harmonize perfectly with glass facades and are invisible from the outside thanks to a compound frame of stepped insulating glass – making architectonic dreams come true. When it comes to functional characteristics, these new windows meet every conceivable wish. The built-in control permits automatic ventilation and precise room temperature adjustment – modern technology for top comfort and security.

Elegant and secure. A built-in motor enables our parallel action windows to be opened and closed in parallel. Opening is possible in stages. No need to fear intruders when you let in more air! The windows fit perfectly with post- and beam construction techniques and harmonize discreetly with the façade because of the minimum visible width.

Modern and convenient. The s:stebler top-hung open-out window can be opened vertically. When it is installed in the upper area of a façade, the window can be opened to allow ventilation. Fitted in the lower area, our top-hung open-out window makes a perfect feature to let fresh air in.
