

s: 11 – Mailbox with lockable
package compartment

Subtle design for tangible convenience

Lockable package compartment

Package compartments in mailboxes are practical places to drop off packages but are not always secure. Then again, no one wants to find a pick-up slip from the postal carrier in their mailbox instead of the long awaited package itself. The lockable compartment from s:stebler now solves this problem with a smart safety mechanism. The package compartment is not locked until the postal carrier turns the latch lock. The package remains safe in the locked compartment until the compartment is unlocked with a key.

Wealth of options

As with all products from s:stebler, the s: 11 is also made in standard sizes and on request, in custom sizes – free-standing, mounted, or built into a wall, if need be accessible from both sides. With an integrated doorbell system, further elements can be incorporated as options, from intercoms or video monitoring to light switches and various types of lighting.

How the package compartment works

- 1 The postal carrier comes while you are gone.
- 3 The postal carrier opens the compartment – without a key – and puts the package there.
- 4 He locks the lockable compartment by pressing down on the handle. The latch mechanism locks shut.
- 5 On arriving home, you conveniently open the locked compartment with a key and remove your package.
- 8 The compartment mechanism is automatically available again for the next major delivery.

Durable Swiss quality

Made of a non-rusting and corrosion-proof aluminum alloy, the mailboxes from s:stebler are synonymous with robust durability no matter what the weather conditions. Thanks to the patented water drain channel, they are rain-proof and the letter slot is additionally protected with a rubber seal. s:stebler has been the Swiss market leader and prominent in mailbox construction for more than 60 years. All models are made by hand with premium materials in production facilities located in Oensingen in the Canton of Solothurn.
