

Smart parcel box
s: easy Touch

With the s:easy smart parcel box system, delivered goods or documents can be deposited in a secure compartment until they are picked up. In the future, the recipient no longer has to be present personally to receive these items. The entire system is very clever and easy to use.

The mail carrier selects the recipient and the required compartment size on the touchscreen and deposits the goods or documents in the secure parcel compartment. The recipient is informed of the delivery by e-mail and picks up the deposited item(s) using a PIN or badge. An e-mail is sent with a notification of the pick-up or, if need be, a reminder to pick up the item(s).

The s:easy Touch parcel box system can also be used as an addition to a conventional or existing mail box system. So, in housing complexes or apartment buildings, letters can still be deposited in letterboxes as usual, while parcels can be stored in the secure parcel box. However, the system is not only useful for the temporary storage of delivered parcels or documents; it can even be used to store keys or return deliveries until pick-up for secure hand-over by means of a delivery button.

The parcel box is made of aluminum and available on request with a powder-coated or anodized/color-anodized finish. And as you would expect, it is manufactured to the highest quality standards and with an elegant design at our Swiss site in Oensingen.
