

Intelligent parcel box
s: easy Touch

With the s: easy smart parcel box system, delivered goods or documents can be deposited in a secure compartment until they are collected. In the future, the recipient no longer needs to be personally present to receive these items. Our service is designed for efficiency and ease of use.

The mail carrier selects the recipient and the required compartment size on the touchscreen and deposits the goods or documents in the secure parcel compartment. The recipient is informed of the delivery by e-mail, and upon collecting the deposited item(s), uses a PIN code or badge. The recipient will be notified by e-mail of the successful collection or, if need be, reminded.

The s: easy Touch Parcel Box system can also be used as an addition to a conventional or an existing mailbox system. In housing complexes or apartment buildings, letters can still be deposited as usual, whereas the parcels can be stored in the secure parcel box. However, the system is not only useful for the temporary storage of delivered parcels or documents; it can also be configured to safely store keys or returns, until they are collected, through a "dispatch" button.

The collection unit is manufactured from aluminium and available on request with a powder-coated or anodised/colour-anodised finish. We guarantee a high-quality product with an elegant design, manufactured at our Swiss site in Oensingen.
